Projects

Assessing the Reusability of Pre-trained Code Embeddings | *GitHub*

- A low-cost offline framework for evaluating the generalizability of embedding in code analysis tasks.
- Patched the generalizability of existing pre-trained embeddings based on the semantic metamorphic relationships.

Rethink Negative Sampling in Bayesian Personalized Ranking | *GitHub*

- Analyzed a limitation of the popularity-based sampling scheme in terms of non-uniform negative sampling bias.
- Corrected the bias and designed related negative sampling distributions to boost the Bayesian personalized ranking (BPR).

Automatic Delivery Vehicle Design | *GitHub*

- A simulation project that incorporated the Courier and TSP travel agent problems into designing autonomous delivery vehicles.
- Designed a path planning algorithm by incorporating the A* heuristic rules into the genetic evolution.
