Projects

Assessing the Reusability of Pre-trained Code Embeddings

- Developed a cost-efficient offline framework to assess the generalizability of embeddings in code analysis tasks.
- Evaluated the generalizability of existing pre-trained embeddings leveraging semantic metamorphic relationships.

Rethink Negative Sampling in Bayesian Personalized Ranking

- Identified a limitation of popularity-based sampling due to non-uniform negative sampling bias.
- Rectified this bias by creating tailored negative sampling distributions, enhancing Bayesian personalized ranking (BPR) performance.

Automatic Delivery Vehicle Design

- Simulated a project integrating the Courier and TSP challenges for autonomous delivery vehicle design.
- Formulated a path planning algorithm by incorporating the A* heuristic rules with genetic evolution principles.
