# Content-aware Dynamic Graphs for Log Anomaly Detection

Princeton, NJ

- Configured dynamic attributed graphs by identifying log components and their hierarchical relationships.
- Proposed a GNN-based temporal-attentive transformer for detecting anomalous edges in dynamic graphs.

#### Assessing the Reusability of Pre-trained Code Embeddings

Dallas, TX

- Developed a cost-efficient offline framework to assess the generalizability of embeddings in code analysis tasks.
- Evaluated the generalizability of existing pre-trained embeddings leveraging semantic metamorphic relationships.

#### Rethink Negative Sampling in Bayesian Personalized Ranking

San Diego, CA

- Identified a limitation of popularity-based sampling due to non-uniform negative sampling bias.
- Rectified this bias by creating tailored negative sampling distributions, enhancing Bayesian personalized ranking (BPR) performance.

## Automatic Delivery Vehicle Design

San Diego, CA

- Simulated a project integrating the Courier and TSP challenges for autonomous delivery vehicle design.
- Formulated a path planning algorithm by incorporating the A\* heuristic rules with genetic evolution principles.
